**Exercise 5.2 – Querying Documents**

Using the "Find() with Specific Fields Example," complete the following:

1. Start your MongoDB database
2. Start the MongoDB shell
   a. mongo
3. Select one document, filtered by employee_id with the following fields:
   a. last_name
   b. email
   c. date_created
4. Take a screenshot of the query and outputted result set
5. Select a second document, filtered by last_name with the following fields:
   a. first_name
   b. last_name
   c. email
6. Take a screenshot of the query and outputted result set
7. Combine the screenshots in a single word document and include your name, date, and assignment.
